

Step Therapy

Step therapy is a program intended to control the costs and risks of prescription drugs. It requires a patient to begin with the most cost-effective and safest drug therapy (Step One drugs) for a medical condition. The patient can switch to other more costly therapies (Step Two drugs) only if necessary and after the Step One drug therapy has been completed, without success. The patient can always choose a Step Two drug prior to trying a Step One drug; however, the plan will not cover the Step Two drug in that case.

Share the list below with your doctor and ask him/her to prescribe a Step One drug if and whenever possible. Step therapy medications are listed below:

Please Note: This drug list is subject to change. For the most current Step Therapy list and program criteria, please visit emhp.welldynrx.com.

****You must use two (2) Step One drugs before using a Step Two drug**

THERAPEUTIC CATEGORY	Step One Drugs	Step Two Drugs
