

Step Therapy

Step therapy is a program intended to control the costs and risks of prescription drugs. It requires a patient to begin with the most cost-effective and safest drug therapy (Step One drugs) for a medical condition. The patient can switch to other more costly therapies (Step Two drugs) only if necessary.

Share the list below with your doctor and ask him/her to prescribe a Step One drug if and whenever possible. Step therapy medications are listed below:

Please Note: This drug list is subject to change. For the most current Step Therapy list and program criteria, please visit emhp.welldynrx.com.

****You must use two (2) Step One drugs before using a Step Two drug**
